

# MOBOLIZE FREQUENTLY ASKED QUESTIONS (FAQ)

## What is Mobolize SharePoint?

Mobolize is a software only solution that uses a unique dynamic caching technology to greatly enhance the access to Web-based business applications when online and enable access when offline. Applications such as Microsoft SharePoint are fully functional with cached files on the user's hard-drive so that an "in the office" experience is available to the user wherever and whenever.

## How does Mobolize save me money?

Mobolize does not require hardware infrastructure investments like similar technologies and reduces the overall network traffic as SharePoint files are cached to each user's hard-drive. Our software solution is also simple to install and deploy requiring limited training and support resources.

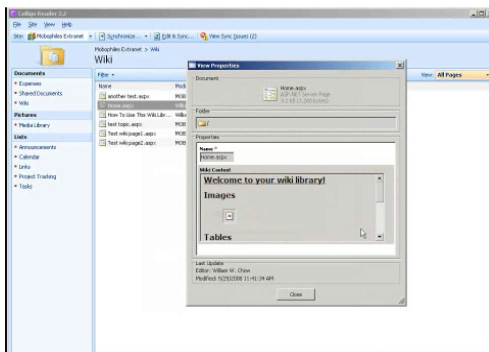

## What management tools does Mobolize provide?

Our software provides comprehensive reporting and management of the desktop client including application performance metrics by account, user, etc., offline usage reports, disk usage, available disk space and more.

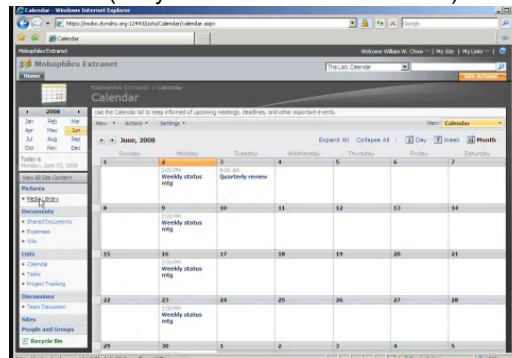

## How does Mobolize differ from competitors?

Mobolize is a software only solution that transcends traditional application acceleration solutions and content data networks (CDNs). With Mobolize, the SharePoint user experience is greatly enhanced when both online and offline. Response times are boosted by up to 10 times when in the office and access to the fully functional SharePoint application is enabled whenever and wherever a user desires. Imagine users being fully "connected" to SharePoint at 35,000 feet.
